PART ELEVEN Real Estate

# REAL ESTATE INVESTING

"Don't wait to buy real estate. Buy real estate and wait."

- Will Rogers -

### Part Eleven - Real Estate

I'm excited about <u>today's lesson</u> as it covers one of my favorite buckets – real estate. I'm not talking about a real estate business or being a real estate agent. I'm talking about owning your own home and investing in rental properties or vacation rentals. What I find so exciting about real estate investing is that you can generate massive returns with little money, which can help you achieve your desired lifestyle sooner rather than later.

For example, let's say Bob invested \$10,000 in the stock market, and that investment went up 20% over the course of a year, then that stock account would now be worth \$12,000. That's a pretty good return.

If Bob bought a \$300,000 property and put \$10,000 down, and within a year earned a 4% appreciation, the property's value increased by \$12,000, reaching a rate of return of 120%. Which one would you rather have? 120%!

This is the power of investing in a leveraged asset.

In the workbook, you'll find spreadsheets and examples to help you understand the concepts we present. You'll also want to go to the App Store and download the PLACE Mortgage Calculator. Don't forget to download the two coordinating spreadsheets, the <u>5 Homes in 30 Years Model and the 10 Homes in 30 Years Model</u>. These resources can also be found at <u>WinMakeGive.com</u>.

# Real Estate - Cap Rate

### What is cap rate?

Capitalization rate, often referred to as the "cap rate," is a fundamental concept used in real estate investing. It is the rate of return on a real estate investment property based on the income the property is expected to generate. The metric is used to estimate the investor's potential return on their investment.

### **Cap Rate Equation = Net Operating Income(NOI)/Purchase Price**

The net operating income (NOI) is the annual rental income minus the operating expenses. The purchase price is the market value of the property.

A good cap rate is relative to the location and the current market demand. In some areas, a 4% cap rate would be good, while in areas where housing prices are naturally lower due to less population or demand, a 10% cap rate may be considered the minimum. In addition to market demand and location, property types like apartments, offices, hotels, or industrial can dictate the range of acceptable cap rates.

### **Examples:**

You are looking at an \$800,000 investment property. After all expenses are paid (excluding mortgage and interest), the NOI is \$20,000. Divide \$20,000 by \$800,000 to get your get cap rate.

$$20,000/800,000 = .025 = 2.5\%$$
 cap rate

You are looking at a \$400,000 investment property. After all expenses are paid, the NOI is \$25,000. Divide \$25,000 by \$400,000 to get your cap rate.

## Real Estate - Cash-on-Cash Return

Cap rate is a standardized way of looking at a property's ROI. While it is a valuable metric to gauge investment potential, it isn't the only calculation to consider. You'll also want to determine the cash-on-cash return.

#### What is cash-on-cash return?

Cash-on-cash return measures the annual return on the total cash investment. The total cash investment is all the cash you pay to make your rental property operational, including the amount of money paid to purchase it, closing costs, rehab costs, and any loan fees (if you got a bank loan).

### Cash Flow/Total Cash Investment = Cash-on-Cash Return

When you use the owner-occupied investment property purchase model, the goal is to put less money down (3 to 5% for owner-occupied vs. 20 to 25% for non-owner occupied) and get a return on the down payment within five years so you can reinvest that money into another property.

**Non-owner occupied example.** You're considering purchasing a \$400,000 investment property that you will not occupy, requiring a 25% down payment (\$100,000). The property cash flows \$500 a month, earning an annual cash flow of \$6,000. Divide \$6,000 by \$100,000.

### 6,000/100,000 = .06 = 6% cash-on-cash return

With a 6% cash-on-cash return, it would take 16.67 years to earn the \$100,000 down payment back.

**Owner-occupied example.** You are considering a \$400,000 property that you will occupy, requiring a 5% down payment (\$20,000). Two years later, you rent out this property and cash flow \$500 a month, earning an annual cash flow of \$6,000.

### 6,000/20,000 = .3 = 30% cash-on-cash return

With a 30% cash-on-cash return, it would take just three years to earn the \$20,000 down payment back. With this model, you can expect to recoup your down payment within three years of purchasing the property.

# Real Estate - Cash-on-Cash Return Continued

**Second home example.** You are considering purchasing a \$400,000 property for a second home, requiring a 10% down payment (\$40,000). This property will also be used as a vacation rental. The property has the same annual cash flow of \$6,000. Divide that by \$40,000.

### 6,000/40,000 = .15 = 15% cash-on-cash return

With a 15% cash-on-cash return, it would take a little over 6 years to earn back the \$40,000 down payment.

You're considering a \$600,000 property for a second home that you plan to use as a vacation rental, requiring a 10% down payment (\$60,000). The property has the same annual cash flow of \$12,000. How many years it will take to earn back your down payment? (cash flow/down payment = number of years)

### How to use the formula to calculate for other variables.

Using our \$400,000 rental property example with a NOI of \$25,000 and a cap rate of 6.25% (\$25,000/\$400,000 = .625 = 6.25% cap rate), we can move these numbers around to solve for other variables.

Solve for net income = 400,000 (purchase price) X .625 (6.25% cap rate) = \$25,000

Solve for purchase price = 25,000 (NOI) / .625 (6.25% cap rate) = \$400,000

A property cash flows \$25,000 a year, and the cap rate is 8%, what is the purchase price?

\$25,000 / .08 (8% cap rate) = \_\_\_\_\_ purchase price

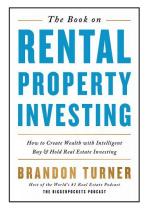

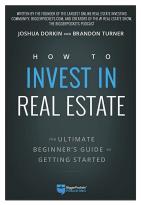

# Real Estate - Key Takeaways

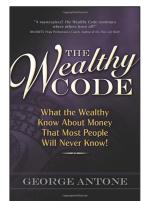

- 1. The easiest way to build wealth is to buy owner-occupied homes and purchase five or ten properties.
- 2. Your financing matters. It is easier to get approved financing for owner-occupied homes. Your down payment and interest rate matters for delivering cash-on-cash return.
- 3. Use cap rate to estimate what price you would pay for a potential property based on rental income and net operating expenses.
- 4. Only buy properties under market value that cash flow significantly enough to get your down payment back within a certain time frame. We suggest five years or less.

### Real Estate - Reflection

### Is now the time to start building your portfolio?

| Go to your favorite real estate agent's website and find out your home's market value. If you don't have an agent, <u>find a PLACE agent near you</u> . |
|---|
| Write down the market value of your home.   |
| Review your mortgage documents. Write down your monthly payment amount.   |
| Go to <u>rentometer.com</u> to look up rental prices in your area. Write down the average rental price you may get for your home.                       |
| Is the rental price larger than your mortgage payment? Write down your potential cash flow for your home.   |
| Are you in a position to start building your portfolio now?   |

### **DISCUSSION QUESTIONS**

What cap rate do we believe is a good rate to look for when searching for investment properties?

What type of real estate investment would be better for us, a long-term rental or a vacation rental, and why?

What is stopping us from becoming a real estate investor today besides access to funds?

Now that we have that answer, where can we find the funds?

# REAL ESTATE INVESTING

"Now, one thing I tell everyone is to learn about real estate. Repeat after me: real estate provides the highest returns, the greatest values, and the least risk."

- Armstrong Williams -

# Part Eleven Homework Question

| Andrew Carnegie said, | "Ninety percent of all millionaires become |
|-----------------------|--|
| so through owning     | ·"   |
